set breakpoint for ring3 application

Posted by ictsecurity0 - 21 Jun 2011 - 09:46

---

i setuped the remote debugging localhost with vmware through namepipe/com1. After i access to the kernel mode, is it possible i debug the ring3 application (for example hello.exe) in vmware?

My Question:

1) how can we set the breakpoint in windbg (localhost) with EntryPoint of ring3 application hello.exe (vmware)? i need the windbg break on the entrypoint of hello.exe (execute in vmware)...

i tried "bp @$exentry" but failed..

thanks
